

CUSTOMIZED DHCP SERVER IN PYTHON USING SCAPY

After a successful installation of Python and Scapy in either Windows or Linux, copy and paste the code below in a file called scapy_dhcp.py and save it in your Scapy directory.

```
#input info
server_ip="12.154.254.33"
client_ip="10.154.254.15"
server_mac="00:0B:CD:AE:9F:C6"
client_mac="00:02:a5:ea:54:20"
subnet_mask="255.255.255.192"
gateway="12.154.254.10"

#DHCP leases
def detect_dhcp(pkt):
    #If DHCP Discover then DHCP Offer
    if pkt[DHCP] and pkt[DHCP].options[0][1] == 1:
        print "\nDHCP Discover packet detected"
        sendp(
            Ether(src=server_mac,dst="ff:ff:ff:ff:ff:ff")/
            IP(src=server_ip,dst="255.255.255.255")/
            UDP(sport=67,dport=68)/
            BOOTP(
                op=2,
                yiaddr=client_ip,
                siaddr=server_ip,
                giaddr=gateway,
                chaddr=client_mac,
                xid=pkt[BOOTP].xid
            )
            DHCP(options=[('message-type','offer')])/
            DHCP(options=[('subnet_mask',subnet_mask)])/
            DHCP(options=[('server_id',server_ip),('end')])
        )
        print "DHCP Offer packet sent\n."
    #If DHCP Request then DHCP Ack
    if pkt[DHCP] and pkt[DHCP].options[0][1] == 3:
        print "DHCP Request packet detected"
        sendp(
            Ether(src=server_mac,dst="ff:ff:ff:ff:ff:ff")/
            IP(src=server_ip,dst="255.255.255.255")/
            UDP(sport=67,dport=68)/
            BOOTP(
                op=2,
                yiaddr=client_ip,
```

```

siaddr=server_ip,
giaddr=gateway,
chaddr=client_mac,
xid=pkt[BOOTP].xid
)/
DHCP(options=[('message-type','ack')])/
DHCP(options=[('subnet_mask',subnet_mask)])/
DHCP(options=[('server_id',server_ip),('end')])

```

```

print "DHCP Ack packet sent\n\nCtrl+C to exit\n"
#exit when lease has been granted
#sys.exit(0)

```

#sniff DHCP requests

```

def start():
    sniff(filter="arp or (udp and (port 67 or 68))", prn=detect_dhcp, store=0)

```

Open Scapy and type the following:

```

import scapy_dhcp
scapy_dhcp.start()

```

The result can be seen using Wireshark

The screenshot displays a Wireshark network traffic capture. The top pane shows a list of packets with columns for Source, Destination, Protocol, and Info. The bottom pane shows the details of the selected packet (Frame 36), including Ethernet II, Internet Protocol, User Datagram Protocol, and Bootstrapping Protocol (DHCP) fields. A terminal window is overlaid on the bottom right, showing the execution of Scapy and the output of the scapy_dhcp.start() function, which reports the detection of DHCP Discover, Offer, and Ack packets.
